Atlas Lithium accelerates exploration campaign at its flagship project

December 2022

By Duncan Moore

Atlas Lithium Corporation, a mineral exploration company focused on lithium and other battery metals critical to powering the green energy revolution, has brought a third diamond core drilling rig at the Abelhas Target in the Neves Area, part of its flagship 100% owned Minas Gerais Lithium Project (MGLP).

Two additional diamond core drilling rigs have also been pre-ordered for MGLP, which encompasses 227km² of mineral rights that the company believes to be the largest such collection in a premier jurisdiction for hard-rock lithium known as Lithium Valley in the state of Minas Gerais in Brazil.

"This acceleration in our lithium exploration campaign is occurring alongside the positive results already obtained," Marc Fogassa, chairman and CEO of Atlas Lithium, said.

"With an increasing number of active drills, we anticipate faster generation of data required for the next iteration of our technical report. The determination of the mineral resources for lithium at our flagship project is important in the context of the conversations that continue to occur between Atlas Lithium and large enterprises seeking to secure lithium supply."

Atlas Lithium's recent drilling has focused on an area at the Abelhas Target with high-grade lithium mineralisation ranging from 1.00% Li₂O to as high as 3.25% Li₂O. Such location remains open for advance in mineralisation at northeast, southwest, and in depth. The expanded drilling capacity will be primarily focused on this known high-potential lithium deposit.
